

Remote Login Instructions

- 1) Navigate to <https://cvwdcitrix.cloud.com/> through your web browser. Enter your login credentials as ab1234@cvwd.org, but substitute your own credentials. The password will be your district computer password.

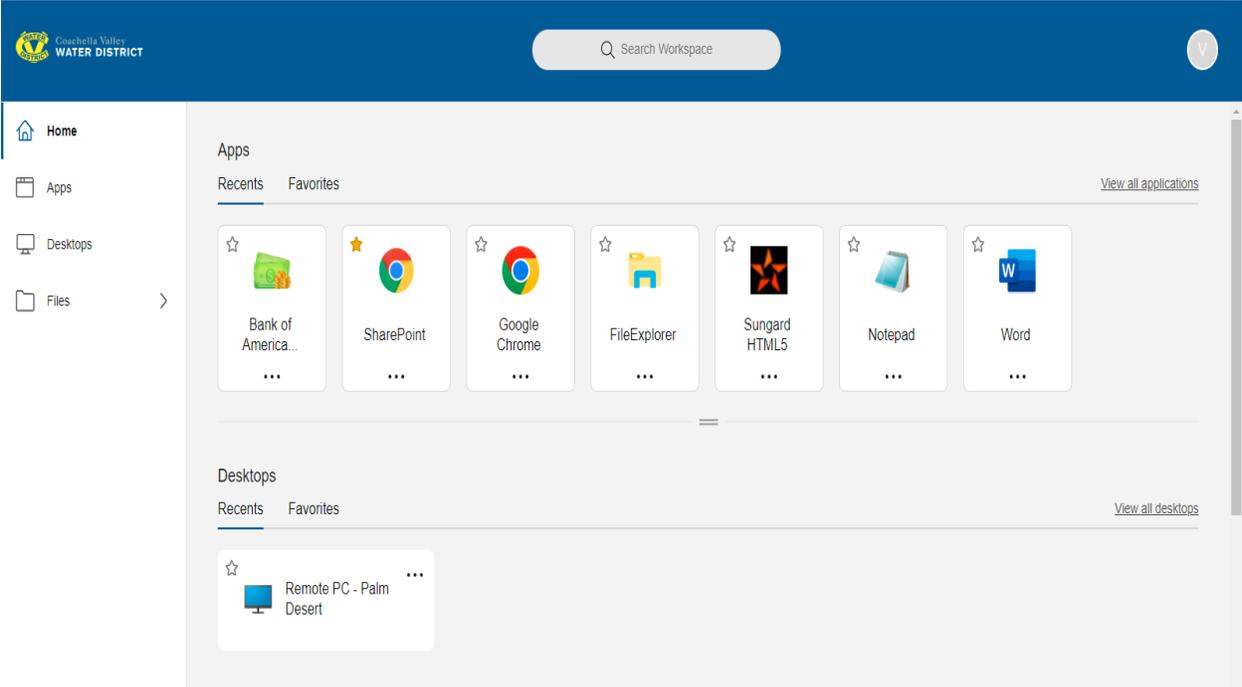

- 2) You'll then be prompted with 2-factor authentication. Click on the text button to receive a 2-factor code to the number listed. If you receive an error message or weren't setup with a 2-factor authentication number, submit a Service Desk request and provide us with a number you'd like the codes to be sent to.

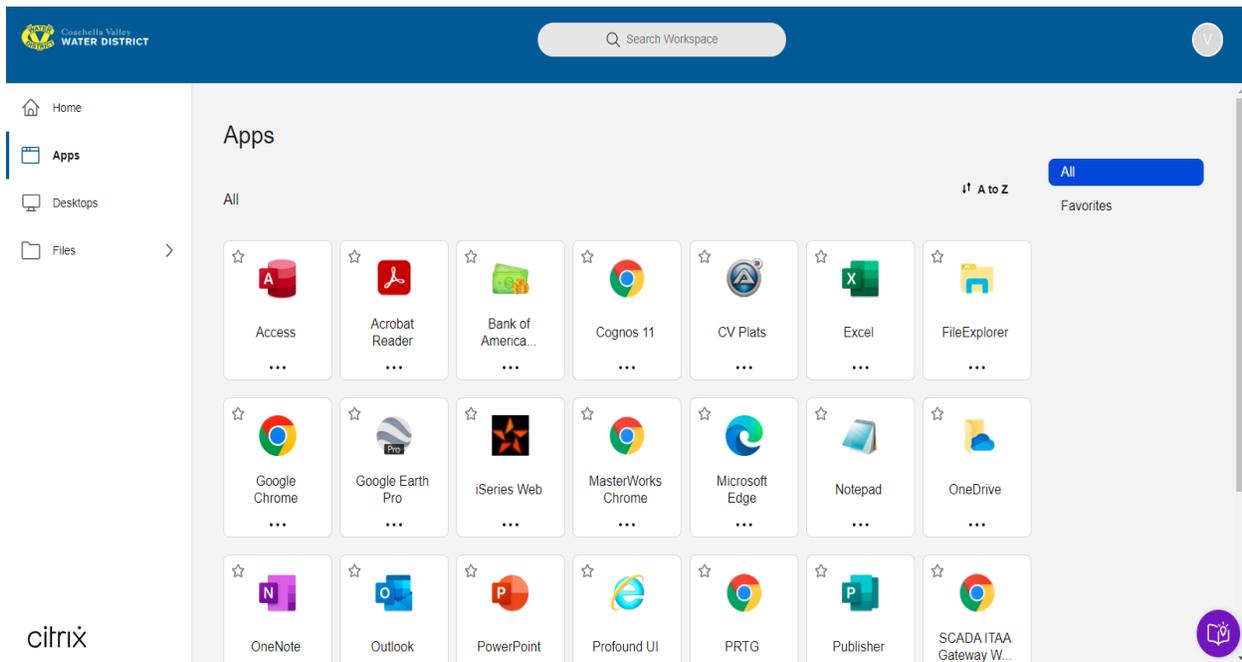

Click **Verify** to proceed.

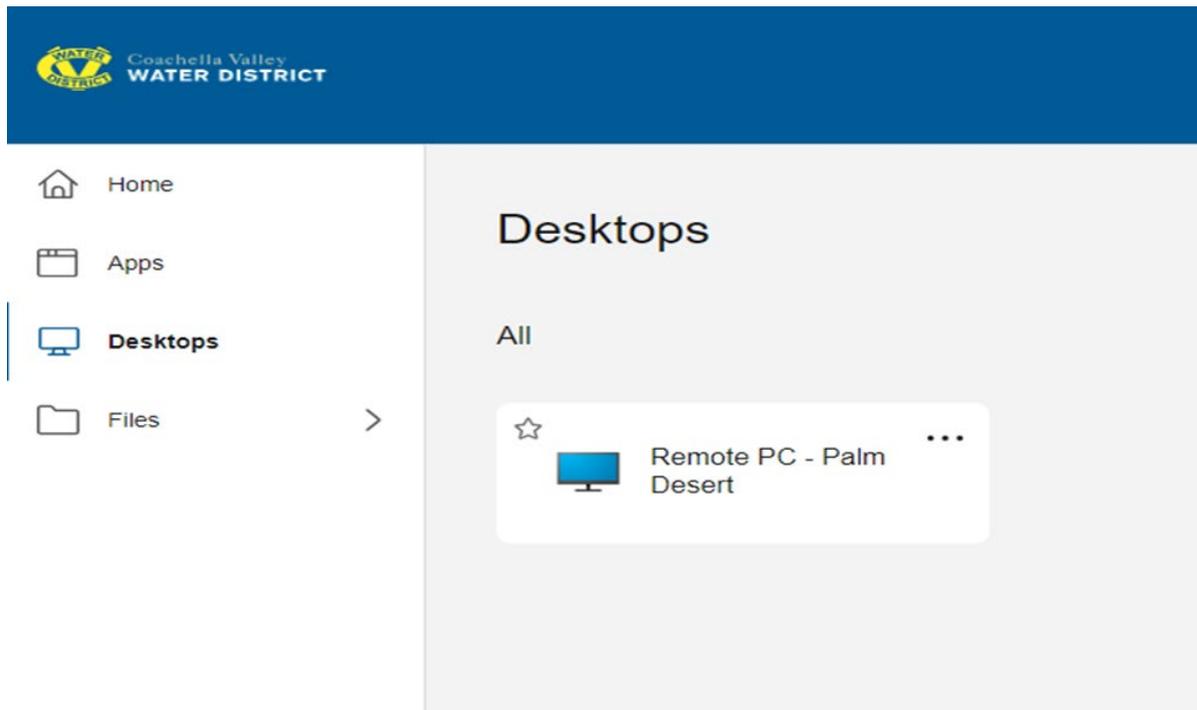

Once you're signed in, you'll see a homepage as seen in the screenshot below:

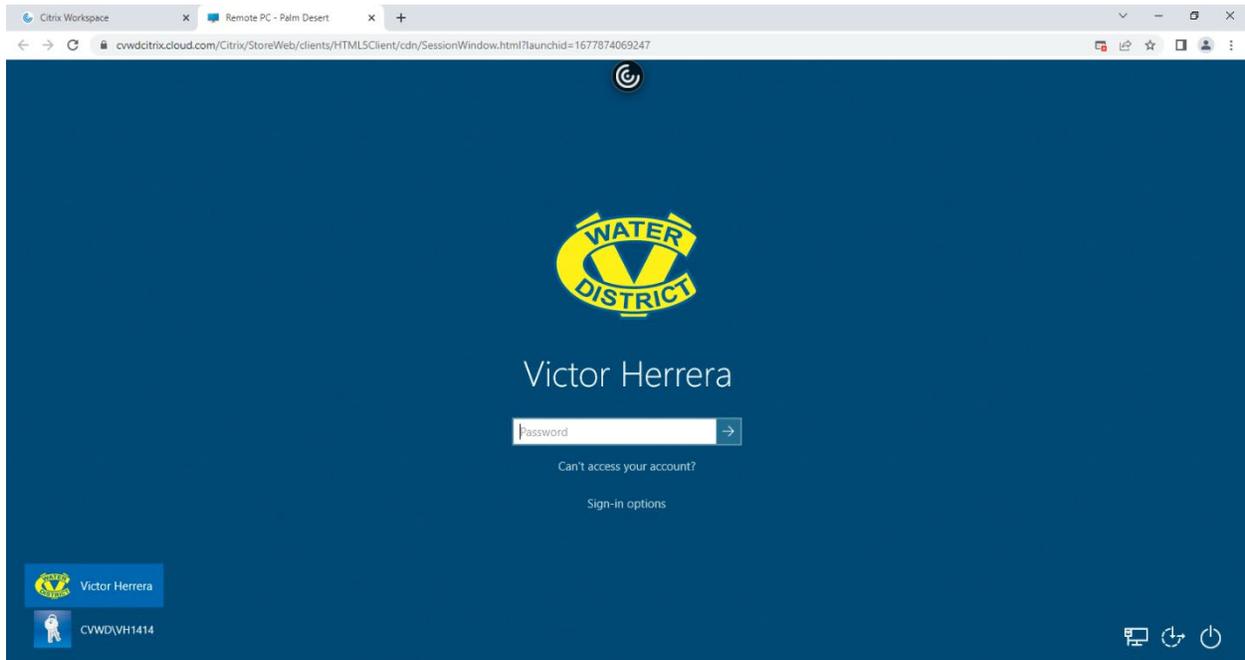

3) Clicking on the **Apps** tab on the left will show you applications that are available to you.

4) Clicking on the **Desktops** tab on the left will show you the desktops that are available to you. If you're in Coachella, your computer will be listed as "Remote PC – Coachella". If you have two, both will show with their respective location. Click on Remote PC and your desktop will launch in a new tab within your browser.

Enter in your Windows password once prompted.

Note: Your computer will need to be powered on to remote in. If you receive an error message, please verify with your colleagues that your computer is powered on.

In most instances, when signing into Citrix Cloud, you may be asked to install the Citrix Workspace client. This is entirely optional on whether you want a client installed on your personal PC. Accessing Citrix Cloud via the browser offers the same experience.
